EDUCATION

B.A. Computer Science, Boston University (BU), Boston, MA

Aug 2024

SKILLS

Technical: Python, SQL (MySQL), Power BI, Tableau, Looker, IBM Cognos, Microsoft Suite (Excel, PowerPoint, etc.), Git, GitLab, AWS, JavaScript, TypeScript, HTML, CSS,

Industry: Data Analysis, Data Visualization, Data Engineering, Database Management, Business Analytics, Machine Learning, Technical Writing, SCRUM, Waterfall & Agile frameworks.

PROFESSIONAL EXPERIENCE

Freelance Technical Consultant

Mar 2025 – Present

Self-Employed, Los Angeles, CA

- Advise small businesses and independent clients on technical strategy, data infrastructure, and process automation initiatives to improve operational efficiency.
- Led database migration projects involving data extraction, transformation, validation, and transfer between legacy and modern database systems using SQL and Python, designing migration workflows to preserve data integrity, minimize downtime, and improve system performance during platform transitions.
- Assist clients with database architecture improvements, schema updates, query optimization, and system scalability planning.
- Build internal dashboards and reporting tools using Tableau, Power BI, and SQL-based analytics to support operational and business decision-making.

Boston University Spark!

Data Science Project Manager, Boston, MA

Sep 2022 – May 2023

- Oversaw 8 Agile development teams (~40 members) across 2 civic tech projects, coordinating sprint planning, backlog grooming, stakeholder meetings, and progress tracking to ensure on-time milestone delivery.
- Collaborated with Boston City Councilor Louijeune on a Fair Housing equity initiative, analyzing 311 complaints, zoning records, and housing authority data to identify patterns of discriminatory practices and unequal code enforcement.
- Collaborated with Boston City Councilor Liz Breadon on a Bad Landlords data transparency initiative by scraping housing court records with BeautifulSoup and processing violation and complaint data using Pandas, Geopandas, and Folium. Developed an interactive Tableau dashboard with a Folium-based map to highlight properties linked to “bad landlords”, enabling tenants, advocates, and city officials to pinpoint problem areas and drive targeted enforcement.
- Helped compile, document, and organize final datasets and GitHub repositories to support long-term project use by civic clients and future student developers, including detailed READMEs, code wikis, and data dictionaries to ensure continuity and usability.

UQUIDO

Data Science Intern, Padua, Italy

Mar 2022 – May 2022

- Contributed to the development of a personalized footwear recommendation engine by structuring and normalizing survey data from 100+ users; built and maintained a MySQL database to streamline data accessibility for data science and product teams.
- Conducted exploratory and behavioral data analysis using Python (Pandas, NumPy, Seaborn) and R, uncovering trends in user preferences and sizing inconsistencies. Created interactive dashboards in Power BI and Tableau to guide product design and UX decisions.
- Documented the data pipeline—including ingestion, transformation, and storage workflows—using Markdown, Lucidchart, and GitHub, improving team onboarding, reproducibility, and future scalability of the system across teams.

CERTIFICATIONS

IBM Data Analyst - July 2026

Pursuing CompTIA A+ Core 1 and Core 2 certification (CertMaster Learn)
